The screenshot shows a Jira issue page for 'BR02 - Possibilidade de deletar mais de uma vez um mesmo item'. The issue is assigned to Carolina Hoewell and is in the 'Alto' (High) priority state. The description explains the requirement: to allow deleting the same item multiple times without error, as long as it hasn't been deleted before. The issue includes a 'Dados de Teste' (Test Data) section with environment details (Windows 10, Intel Core i7-7500U, 128 MB video, 1 TB HD, Microsoft Edge) and a 'Passos para Reprodução' (Reproduction Steps) section with 11 steps. The 'Resultado Esperado' (Expected Result) states that the API should return specific status codes (400 - Invalid ID or 404 - Not found) when attempting to delete an already deleted item. The 'Resultado Atual' (Current Result) shows that the API returns a 200 - OK status when deleting an already deleted item, which is incorrect. An 'Observações' (Observations) section is also present. The 'Atividade' (Activity) section shows a comment from Carolina Hoewell: 'Ficou bom! Preciso de ajuda? Este item está bloqueado... Você pode esclarecer...? Este item está em...'. The page also features a sidebar with navigation options and a top bar with a search bar and user avatars.
